How a Notting Hill Physio Clinic Improved Clinician Performance in 6 Weeks

Notting Hill, London · 3 clinicians · Connected PMS

THE PROBLEM

The clinic had no per-clinician performance visibility. Follow-up rates, HEP assignment, DNA patterns, and utilisation were invisible at the individual level. The clinic was running on instinct — not data. Management conversations were based on impressions rather than evidence, and underperformance went undetected.

Key finding: One clinician's follow-up rate was 1.90 — well below the clinic target of 2.9. Without per-clinician tracking, this gap was invisible to clinic management.

THE INTERVENTION

StrydeOS Intelligence was deployed to surface clinician-level KPIs from the clinic's existing PMS appointment data. Weekly dashboards tracked follow-up rate, HEP compliance, utilisation, and DNA rate per clinician. Data was reviewed in weekly team check-ins to support targeted coaching — not blame.

RESULTS — 6-WEEK CLINICIAN TRAJECTORY

FOLLOW-UP RATE
Before: 1.90
2.50

HEP COMPLIANCE
Before: 82%
91%

DNA RATE
Before: 12%
7%

UTILISATION
Before: 80%
88%

PROJECTED REVENUE IMPACT

~£14,000 /yr additional follow-up revenue across 2 clinicians at £75/session

Projection based on observed trajectory improvement × session rate. Not a guarantee.

WHAT CHANGED

- **Clinician coaching**
  Weekly data reviews replaced annual subjective appraisals. Specific, evidence-based conversations.
- **Accountability without blame**
  Clinicians could see their own metrics and self-correct before management stepped in.
- **Operational confidence**
  Clinic owner gained visibility into which clinicians were converting IAs into full courses.

ABOUT STRYDEOS
strydeos.com · hello@strydeos.com

StrydeOS is a clinical performance platform built for private physiotherapy and MSK clinics. It sits above your existing practice management software — connecting to major PMS platforms — to surface the KPIs that drive clinical outcomes and revenue. Built and
